

NA.YADRA Project Capability Summary

Pacific Maritime Intelligence Platform

Executive Summary

NA.YADRA is a working maritime intelligence prototype designed for Fiji and the wider Pacific. It combines AIS vessel tracking, behavioural detection, risk scoring, port-zone monitoring, satellite-style map overlays, cyber/OSINT indicators, and PDF intelligence reporting.

Current Capability

The platform can currently display live vessel positions, identify suspicious behaviour such as night movement, offshore stopping, repeat activity and stopped-outside-port-zone events, and generate analyst-ready reports. It also includes cyber threat feed monitoring and target vessel intelligence profiles.

Future Capability With Stronger Satellite Fusion

With stronger satellite data and Innovate UK-style funding support, NA.YADRA could be expanded with higher-resolution imagery, more frequent refresh, AIS-dark detection, satellite-AIS mismatch detection, small craft/mothership rendezvous analysis, automated daily briefings, cloud deployment, secure user accounts and wider Pacific regional coverage.

Important Note

All detections are intelligence leads for analyst review only. A flagged vessel does not confirm criminal activity.

Full Dashboard / Maritime Operating Picture

Shows NA.YADRA operating as a live maritime intelligence dashboard with map overlays, vessel markers, risk summary and intelligence panel.

[Screenshot missing: dashboard_full.png]

Behavioural Detection Example - ANTHAS

Shows behavioural detection for ANTHAS including low speed/stopped behaviour, nearest port, distance, coordinates and risk scoring.

[Screenshot missing: anthas_behavior.png]

Night Movement Detection Example - ARROW

Shows NA.YADRA detecting night-time vessel movement near Lautoka Port / Vuda Area with MMSI, distance and coordinates.

[Screenshot missing: arrow_night_movement.png]

Target Vessel Intelligence Profile

Shows vessel profile capability including AIS status, risk level, validation links, analyst notes and investigation workflow.

[Screenshot missing: target_profile.png]

Top Threats / High Risk Vessel List

Shows automated prioritisation of vessels by threat score, flags and watch-zone behaviour.

[Screenshot missing: top_threats.png]

Cyber / OSINT Threat Feed

Shows cyber-maritime fusion capability including phishing, fake recruitment and maritime-linked cyber indicators.

[Screenshot missing: cyber_feed.png]

Satellite / Port Monitoring Example

Shows satellite-style port and yacht monitoring capability around sensitive maritime locations.

[Screenshot missing: satellite_port.png]

Conclusion

NA.YADRA has progressed from a concept into a working prototype capable of producing maritime intelligence leads, visual vessel monitoring, behavioural risk detection and structured PDF reporting. The next stage is to strengthen data quality, satellite fusion, cloud deployment and operational testing with trusted maritime stakeholders.
